# Color Hardener

(Dry-Shake, Colored Surface Hardener)

**INNTECH COLOR HARDENER<sup>†</sup>** is a dry-shake, colored surface hardener used for coloring, hardening and conditioning concrete. This product provides a concentrated coloring method that hardens and densifies flatwork concrete surfaces.

Each color chip on this chart is created using Uncolored Gray Concrete.  
Base Sample (left)

Colors featured on this color chart are standard for the following INNTECH products:

## Color Hardener<sup>†</sup>

- Used in conjunction with INNTECH RELEASE POWDER, INNTECH COLOR HARDENER is the preferred product for creating vibrant colors for imprinted/textured concrete.
- This product is an excellent choice for colored, imprinted concrete flatwork and a variety of architectural concrete treatments that would benefit from improved pattern transfer and increased abrasion resistance.

## Release Powder<sup>†</sup>

- This product allows for the clean release of texturing/imprinting tools from the concrete surface while at the same time providing antiquing or highlighting effects.
- INNTECH RELEASE POWDER is dry-mix of finely ground, streak free powder with a blend of UV-resistant pigments and water repelling agents designed for the clean release of mat-type texture or imprinting tools and texture rollers.

## Stampable Overlay<sup>†</sup>

- INNTECH STAMPABLE OVERLAY is a polymer modified, fiber-reinforced cementitious topping formulated for resurfacing structurally sound, non-moving interior and exterior concrete surfaces. This product is for use with INNTECH IMPRINTING TOOLS and can also be broom finished.
- This product is generally applied at 1/4- to 5/8-inch thickness and is used on commercial, residential, municipal, theme park, and industrial applications. INNTECH STAMPABLE OVERLAY has high compressive strength and can be left exposed to vehicular traffic.

## Micro-Topping<sup>†</sup> and Micro-Topping EXT<sup>†</sup>

- INNTECH MICRO-TOPPING (interior) is very hard and high psi and abrasion resistant while the INNTECH MICRO-TOPPING EXT (exterior) has excellent flexural properties, is breathable and great for exterior application. These products bond to virtually any substrate, including concrete, wood, metal, plastic and sheet rock.
- INNTECH MICRO-TOPPING products are a combination of liquid polymer, color tint packs and specially formulated powder mixtures. Both products can be applied using a variety of application methods, each producing a different finish texture.
- INNTECH MICRO-TOPPING applies at 20-mils (the thickness of a credit card) and INNTECH MICRO-TOPPING EXT applies in multiple layers to achieve a thickness of approximately 90-mils.

## Invigorate - Solid Color Stain<sup>†</sup> and Transparent Color Enhancer<sup>†</sup>

- INVIGORATE products are non-hazardous, ultra-low VOC water-based penetrating concrete staining products free of acid or acrylic. These products make it easy to revive colored surfaces or plain gray concrete by hiding discolorations without altering surface texture.
- These products are made especially for use with existing, unsealed, interior or exterior, concrete and other cementitious surfaces, and are ideal for use with overlays. INVIGORATE products have applications that include high traffic areas, patios, theme parks, resorts, city buildings, pool decks and driveways.

*<sup>†</sup>PLEASE REFER TO CORRESPONDING TECHNICAL BULLETIN FOR PRODUCT AND APPLICATION DATA.*
